
ABOUT

Third-year Computer Science Engineering student with a strong foundation in Machine Learning and Data Science. Passionate about building hands-on projects and exploring innovative ideas. Began learning Machine Learning during the first semester, continuing to deepen understanding of models, data, and real-world problem solving.

EDUCATION

Vellore Institute of Technology, Chennai

B.Tech Computer Science Engineering | 2024 - 2028 | CGPA: 8.84

Relevant coursework: Data Structures and Algorithms, Design and Analysis of Algorithms, Operating Systems, Computer Architecture and Organization, Computer Networks.

Additional training: Machine Learning Foundations - Andrew Ng (Coursera)

High School: 91.2% (Honors)

EXPERIENCE & RESEARCH

Research & Projects

Co-authored a peer-reviewed research paper on a Reinforcement Learning-based traffic monitoring system optimized for edge deployment; designed and trained the RL model architecture for real-time traffic analysis under on-device compute and latency constraints.

Co-developed DG-Hetero-GNN, a domain-generalized heterogeneous graph neural network for cross-domain financial fraud detection, achieving 0.72 F1-score and 89.6% recall on out-of-distribution data, outperforming XGBoost, GAT, GCN, and GraphSAGE baselines across 4 real-world datasets (Elliptic, IEEE-CIS, DGraphFin, AMLSim) spanning 3M+ transaction edges; paper currently under conference review.

Building a hybrid demand-forecasting and deep reinforcement learning system for real-time EV charging price optimization, achieving pricing decisions within 80% of the theoretical optimum.

Leadership

Serving as Tech Lead of HumanoidX club, directing a team on humanoid robotics projects spanning perception, control, and systems integration.

Experience

Machine Learning Intern, BlackVolt Technologies. Built and deployed ML pipelines for production use cases; developed simulation environments for Autonomous Underwater Vehicles (AUVs) to support model training and validation.

Designed the model architecture for an autonomous swarm-drone minefield navigation system; contributed to SLAM integration and risk-mapping algorithms for real-time obstacle-aware decision-making.

TECHNICAL SKILLS

Programming Languages: Python, C, C++, Java

Data Analysis

Soft Skills: Analytical thinking | Problem solving | Logical reasoning | Dedication | Leadership | Communication
